

SOLUTIONS FOR THE ANALYSIS OF WINES, BEER, ALCOHOLS AND SPIRITS

ALLIANCE
INSTRUMENTS
an AMS Company Brand

AUTOMATED ANALYTICAL SOLUTIONS FOR ENVIRONMENTAL & FOOD INDUSTRIES

THE BEST IN WINE ANALYSIS

Alliance Instruments is a premier manufacturer of analytical instrumentation in the agri-food and environmental markets. We have developed our expertise through investment in complementary technologies and through our various partnerships with renowned research centers.

Today, Alliance Instruments can offer laboratories a wide range of solutions that enable them **to automate their wet chemistry** applications for R&D, regulatory reporting, or process/quality control.

With more than 20 years experience in wine analysis Alliance Instruments is a world leader in the market with a comprehensive portfolio of products adapted to meet your specific needs:

- The widest choice of techniques and products dedicated to wine analysis:

continuous flow, discrete, infrared, and sample preparation modules...

- Analysis costs that are competitive: both in terms of equipment, consumables and maintenance.

- Solutions adapted to your needs: fast, simple, modular, compatible and upgradeable.

Above all, you can have confidence that we, at Alliance Instruments, are there for you each step of the way.

Whether it is to dose the SO₂ (free and total) or the volatile acidity, to measure the alcohol or sugars or to analyse any other parameter, Alliance Instruments has both 'off the shelf' or custom solutions for you.

With customer care as a priority, we are continually developing and improving our products and services so that you, like each of our current customers, will be our best reference.

Laurent CLOUSIER
General Manager AMS France

THE RIGHT TECHNOLOGY ADAPTED TO YOUR NEEDS

■ Segmented Flow Analysis (SFA)

Continuous flow technology allows complete automation of all types of wet chemistry analysis. Cost effective and easily adapted to your needs with an extensive range of products, this technique will satisfy your requirements: small or large-bore series, standard methods, complete automation, and high throughput.

■ Discrete Analysis

Discrete technology enables you to run routine analysis, enzymatic and colorimetric. Simple, easy to set up and use, this technique gives you a high level of flexibility and the possibility to run multiple chemistries simultaneously while reducing reagent consumption and operator intervention.

■ NIR Analyzers

Using various NIR technologies (filters, grating, diode array...) our analyzers measure the alcohol content and sugars. Simple and fast results are guaranteed, ready for immediate use.

APPLICATION LAB AND CUSTOMIZED DEVELOPMENTS

Wines, beer, alcohol, spirits... Each product requires specific parameters. Alliance Instruments provides expert advice to help you select the best analytical technique for your workflow and applications. Our hardware and software solutions have been specifically designed to cover most of the market parameters. Furthermore, to satisfy growing demand for custom applications, our application lab is available to develop solutions suited specifically to your needs.

Whether you require new methods, higher throughput, special data treatment, compliance with industry standards, or integration into special IT environments, our team of engineers has the experience to successfully develop your project. Instruments, software, accessories and consumables, we develop turn-key solutions, customized to fit your needs.

FROM DESIGN TO PRODUCTION... COMPLETE PRODUCT MANAGEMENT

■ Integrated Research and Development

At Alliance Instruments, we invest a big part of our revenues into R&D. This investment enables us to design new products as well as develop methods and applications that simplify routine analysis and enable you to measure new parameters. We also cultivate strong partnerships with universities and research centers to share their expertise and transfer their technologies into applications for the market.

■ Production and Quality

Much more than a simple integrator, our manufacturing plants are located in France, Italy and the USA. By controlling each aspect of the production process, we are able to drive continuous improvements in quality, delivery, and reliability of our instruments. We are ISO 9001:2000 registered and actively pursue an environment of continuous improvement.

A TECHNOLOGY ADAPTED, TO YOUR NEED...

ANALYSIS TECHNIQUES

Continuous Flow Technology

As an expert in segmented flow analysis (SFA) for more than 20 years, Alliance Instruments has developed a complete product range, offering you the right solution adapted to meet your application needs... Sampling, incubation, dialysis, filtration, distillation, digestion (according to the method and the sample type) and measurement are fully automated.

Futura

A modular and user friendly instrument, the Futura is the most versatile CFA analyzer available on the market.

Micro-flow, macro-flow, high-resolution digital colorimeter, extended measuring range, high throughput, complete automation (including automatic startup and shutdown)...

Proxima

Compact and cost effective, the Proxima has been designed to reduce analysis cost without reducing analytical performances. The modular design allows up to 5 chemistries simultaneously on a single system.

Discrete Technology

State of the Art technology combined with USEPA compliant methods allows you to maximize productivity in your lab with minimal operator intervention. With automatic method changeover, minimum waste to dispose of and maximum accuracy and precision, The SmartChem instruments are yours for success.

Smartchem 140 Discrete Analyzer

Fully automated discrete analyser to minimize human intervention, improve analytical performance and streamline sample workflow with a throughput of 140 test / hour.

Smartchem 200 Discrete Analyzer

Fully automated discrete analyser to minimize human intervention, improve analytical performance and streamline sample workflow with a throughput of 200 test / hour.

Near Infrared

Infrascan+

Very easy to use, robust, rapid, Infrascan + is widely used in oenology to measure the alcohol content and sugars. 5, 6, 7, or 8 filters. It can be adapted to your sample, whatever the degree of alcohol and sugar content.

Enzymatic kits and reagents

Glucose, fructose, malic acid, lactic acid, acetic acid, SO₂, iron...

Alliance Instruments offers a complete range of reagent kits. Perfectly adapted to discrete and CFA analyzers, they are packaged in the right volume and adapted to your use to minimize loss of reagents.

SAMPLE PREPARATION AND ACCESSORIES

OD Modules & TA/pH

To complete our range of wine analyzers, we have developed:

- A module to measure optical density at 420, 520 and 620 nm
- A module to measure total acidity and pH

Compact, cost effective and easy to use, stand alone, they can also be connected to other instruments (CFA, NIR), to reduce analysis and transfer time.

Samplers

Extend your analysis capacity with our range of samplers (for SFA analyzers).

30 Sampler

Maximum Capacity 30 samples.

104 Sampler

Maximum Capacity 104 samples.

CS9000 Sampler

XYZ with a maximum Capacity of 100 samples.

XYZ Sampler

XYZ with a maximum Capacity of 360 samples.

MUCH MORE THAN A SUPPLIER, A COMPLETE TEAM AT YOUR SERVICE

Allow Alliance Instruments to help solve your toughest applications. Whatever your field of work, obtaining accurate and reliable results is essential. For this reason our service and technical support are there to support you when you need them – both on the phone and at your facility.

ADVICE FOR YOUR PROJECT FROM THE START...

In order to assist you in your technical choices, our teams will be there for you:

- To present the different techniques and their importance for your needs
- To help you draw up your specifications
- To explain in detail how the instruments work
- To demonstrate the repeatability, the accuracy, and the reproducibility of a method
- To familiarise you with the different functions of our software
- To give you a demonstration (on your premises or in our laboratory) illustrating the performances of our analysers

TECHNICAL SUPPORT AND SERVICE

Our team of engineers and maintenance technicians are always close at hand to ensure the top performance of your equipment.

- Call our **technical support hotline** for expert assistance when you have a problem. While phone support is always free, we offer a range of services to ensure that you can have the confidence that a 'helping hand' is always nearby.
- **Preventive Maintenance Contracts.** We offer several different levels of service to ensure we can meet your requirements.
- **On-site Service.** We provide factory based training for our service personnel and distribution partners to ensure that you have emergency on-site support when you need it.

RELIABILITY GUARANTEED

Before being installed, all our machines are subjected to rigorous quality control tests in order to ensure your instrument is performing according to factory specifications. Each module is tested separately to check its good working order. Then, after the validation of each sub-unit and of the final assembly we carry out a complete new series of tests to ensure the routine use of the machine. In the last stage, samples are analyzed using the specific methods you have ordered.

Finally our teams carry out the complete installation of the machine on your premises. Once the machine is set up, a new validation is carried out using your samples, thus allowing you to run your analysis before we finish the installation.

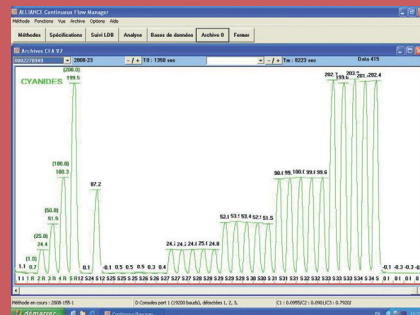

TRAINING COURSES

We want you to get the full benefit of your investment. As such, we have standard curriculum that provides both theoretical and practical training. Frequently, our customers request a tailor-made training course – we find these to be some of the most effective training and enables us to match up specific training with the customer applications. We provide training either at your facility or ours.

SOFTWARE SOLUTIONS

All our systems and accessories are operated by software developed in our applications laboratory utilizing our extensive expertise in the field. They correspond exactly to the analytical requirements of our customers and optimise the performance and capabilities of the instruments. User friendly, our software is as easy to use as it is technologically advanced. It is designed to be integrated into the computer systems of our customers. Moreover, you will benefit from regular software updates to ensure your system is compatible with new technologies and operating systems.

AN INTERNATIONAL GROUP

THREE COMPLEMENTARY COMPANIES, FOUR BRANDS TO SERVE YOU

- **AMS Italy.**

The European head office of the group is located in Italy on the outskirts of Rome. This location serves as a manufacturing and R&D center for the clinical market and the discrete analyzers designed for the environmental market.

- **AMS France.**

A new subsidiary created at the beginning of 2008, combining the activities of Alliance Instruments and Ysebaert. AMS France, located in Frepillon near Paris, France, manufactures continuous flow, infrared, kinetic... the complete product line of Alliance Instruments and Ysebaert. AMS France is responsible for sales in the environmental and industrial/food markets across Europe, Africa, the Middle East and Asia.

- **Westco Scientific Instruments.**

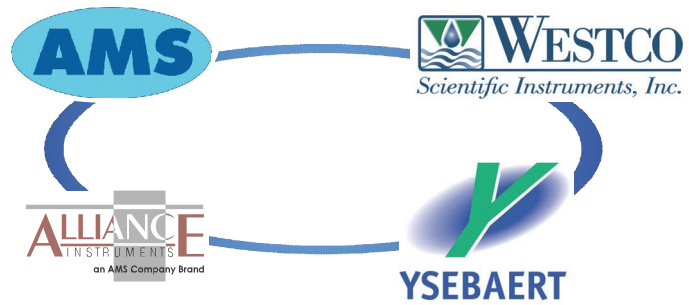

The US headquarters is located in Brookfield, Connecticut. Westco pioneered discrete technology in the environmental market – being the first to create a custom system based on the needs of the environmental market. Westco Scientific is responsible for sales in the environmental and industrial/food markets across North and South America.

- **Alliance Instruments**

A brand of AMS France. With over 20 years experience Alliance Instruments has become a leader for agro-food and environmental analysis, specialists in continuous flow technology.

- **Ysebaert**

Ysebaert, a company founded in 1974 and a brand of AMS France since 2008 is a manufacturer of isolators and ventilation systems for pharmaceutical, biotechnology and nuclear applications.

A WORLDWIDE DISTRIBUTION NETWORK

Besides its different subsidiaries, the AMS Group is present on all continents and in over 30 countries through specialized and exclusive distributors. Each distributor is carefully selected for his knowledge of the markets covered by AMS and his ability to ensure quality sales, installation, service and support in the respective territory. Our distributor teams are, of course, factory trained and supervised in order to have a thorough understanding of our products and techniques.

➔ Specialists for wine, beer and spirits Analyzers

- **Wines**
 - White
 - Red
 - Rosé
 - Spirits
 - Champagne and sparkling wines
- **Beer**
- **Alcoholic beverages**
 - Liqueur
 - Brandy
 - Rum
 - Vodka
 - Whisky
 - All kinds of alcoholic drinks

➔ Alliance Instruments also provides:

- Analytical Solutions for Food
- Analytical Solutions for the Environment
