

2013

Metrohm acquires Foss NIRSystems, which is the beginning of the Metrohm spectroscopy portfolio.

2016

Metrohm launches OMNIS, a new, modular platform for chemical analysis.

Willi Studer

2011

Committed to Switzerland: new R&D and production facilities are opened in Herisau.

1990

Launch of the 701 Titrino, the first instrument integrating buret and titrator in a small bench-top design.

1982

Bertold Suhner and his co-owners of Metrohm AG, Hans Winzeler and Lorenz Kuhn, establish the non-profit foundation «Metrohm Stiftung» and donate their shares of Metrohm AG to the foundation. Ever since, Metrohm has been 100% owned by «Metrohm Stiftung» safeguarding the independence of the company.

1987

Launch of the 690 Ion Chromatograph – the proud beginning of the Metrohm ion chromatography portfolio.

ANNIVERSARY BLOG

During our anniversary year we would like to connect with people all over the world. We are doing this with a special anniversary tour. Starting from Herisau, our young colleague Stephanie Kappes will visit customers, colleagues, and events on all continents and write about her journey in our anniversary blog. Follow her on:

at the 25-year anniversary
of Metrohm AG

«A SINGLE PERSON CAN NEVER
TAKE FULL CREDIT FOR MAKING
A COMPANY SUCCESSFUL.
IT IS ALWAYS TEAMWORK
THAT LEADS TO SUCCESS.»

75 YEARS OF METROHM

Slowly but steadily we have grown from a small local start-up to a successful global group. Here are but a few milestones from our early to our recent history. And there are more to come in the future.

1949

Launch of the E 166 Titriscope, the first Metrohm titrator. The young company is struggling for survival.

1957

Metrohm presents the E 274 Piston Buret substituting manual dispensing with glass burets. In the 1950s, Metrohm successfully establishes itself in the market as a maker of high-quality instruments for chemical analysis.

1978

Launch of the 636 Titroprocessor, the first titrator controlled by a microprocessor.

Bertold Suhner

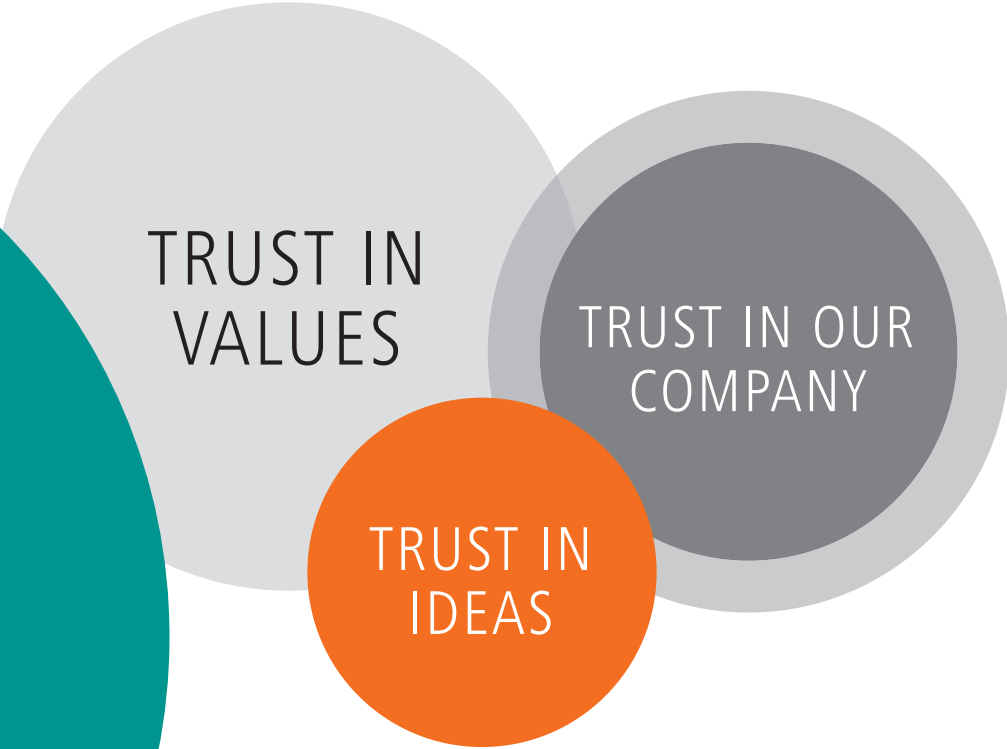

APRIL 1, 1943

Together with his friend Willi Studer (Dec. 17, 1912–Mar. 1, 1996), mechanical engineer Bertold Suhner (May 5, 1910–Apr. 26, 1988) founds Metrohm AG in Herisau, Switzerland. They start off in rented rooms of a former textile mill.

YOU CAN RELY ON US

This year we celebrate 75 years of Metrohm. That's 75 years of trust in the very special people that are Metrohm. Trust in their loyalty and innovative ideas that have made us a global market leader. And, of course, the trust of our customers in the quality of the products and services we deliver.

THE FUTURE IS WHAT YOU MAKE IT

We have grown in a niche. And we have always followed our own ideas. The modern piston buret was invented by Metrohm. So was the first titrator controlled by a microprocessor. And we have proven with our ion chromatographs that you can successfully challenge the market leader, if you believe in yourself and your future.

STAY TRUE TO YOURSELF

Our values have safely guided us through 75 years. Independence, prudence, generosity, and the commitment to our home canton, Appenzell Ausserrhoden, have always helped us navigate successfully in good times, and also, more importantly, through rough times.

TRUSTED SINCE 1943

Metrohm is a non-listed company owned by the nonprofit foundation Metrohm Stiftung. Because our horizon extends beyond the next quarterly financial statements, we can make long-term plans and decisions – in the interest of our customers and for the benefit of our employees.
