

Vision Air software

Get the most out of your Vis-NIR spectrometer with Vision Air software. Vision Air features a clearly structured user interface, intuitive operation, and straightforward control functions.

Use the network and database functions of Vision Air and benefit from additional possibilities:

- **Cost efficient system usage**

Focus on the task: A trained and authorized user may configure multiple instruments over different locations while operators benefit from predefined Operating Procedures for routine measurements.

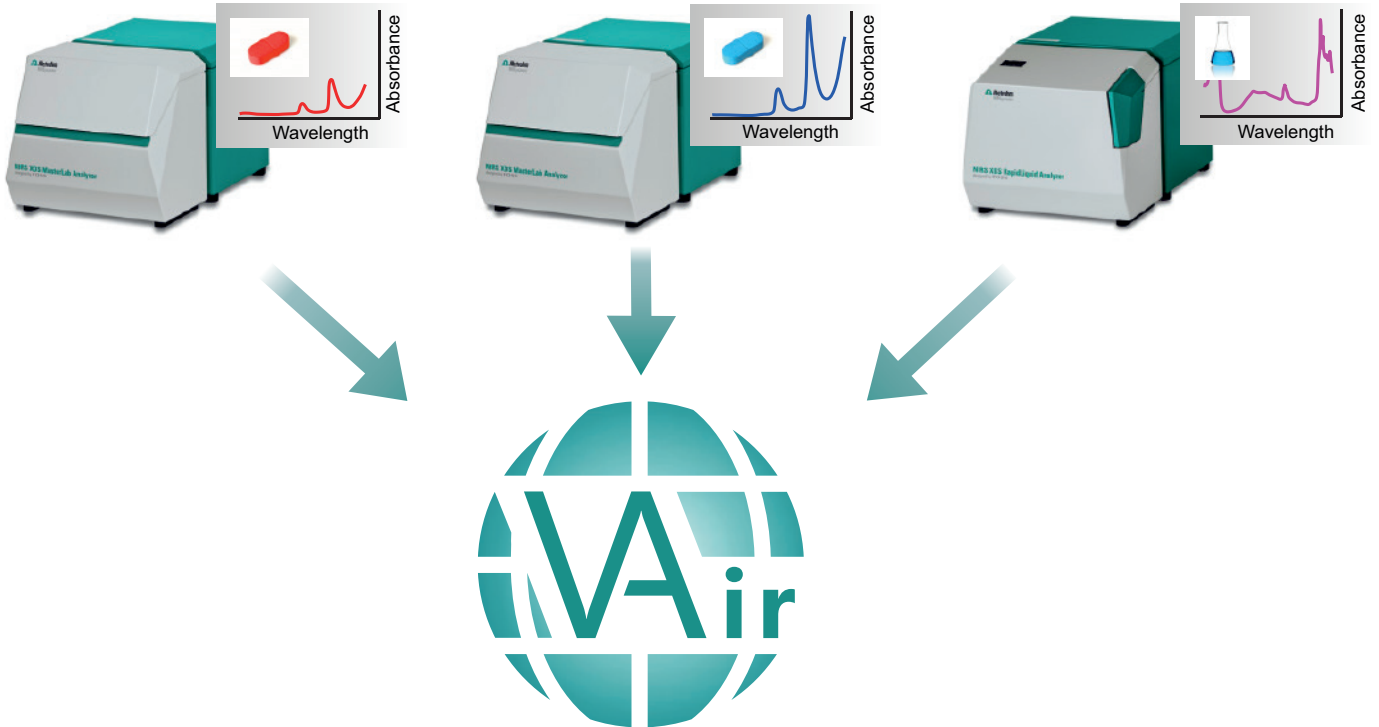

- **Save Time! Synchronise the easy way**

Spectrometers are updated in one step and any new instrument is automatically configured when added to the network.

- **Fast worldwide data access**

Expert support is convenient with Vision Air. Data is always present and worldwide accessible for proactive local support.

Vision Air – Powerful Database

- **Large data sets? No problem!**

No more hassle to search for the right project anymore! Data is stored in one database and can be found in seconds due to various filter options.

- **Guaranteed data integrity**

Schedule your backups whenever it suits you best – due to each data having a unique ID, the Vision Air database concept prevents files from corruption.

- **Improved Security**

With the database storage model of Vision Air data access is only possible by the software. As a result of one central location, data access can be much better controlled and data redundancies are ruled out.
